

From project documents to priced bid – purpose-built for demolition, abatement and remediation.

Built for demolition, abatement, and remediation — not adapted from a general contractor's tool.

AI Extraction from Your Documents

Upload pre-demolition surveys, floor plans, and scope of work specs. FieldFlō reads them together, identifies scope items, automates takeoff measurements, and populates a draft estimate — ready for your estimator to review.

Six-Category Cost Cascade

Every scope item automatically drives costs across labor, materials, equipment, disposal, salvage, and other direct costs. Change one quantity and every figure recalculates.

Purpose-Built for The Trades

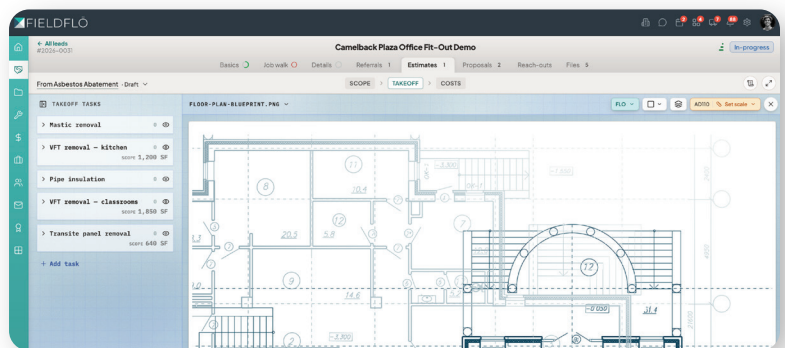

Built in partnership with estimators across multiple service types, the platform automates as much of the estimate-building process as possible, so you can spend less time on paperwork and more time winning work.

Not a general contractor's tool adapted for your trade. Most estimating software was built for residential and commercial GCs and retrofitted to specialty trades. FieldFlō Takeoff & Estimating is built from the ground up for the work demolition and abatement contractors actually do — with cost categories, scope templates, and rate catalogs that reflect how this work is priced.

Upload your documents. Let the AI do the first pass. An estimator uploads a pre-demolition survey, floor plans, and scope of work. FieldFlō's AI reads them together, identifies scope items, automates takeoff measurements, and populates a draft estimate with source references back to the documents. The estimator reviews, corrects, and adds items the AI missed — instead of building the estimate from scratch.

A six-category cost cascade that recalculates automatically. Every scope item drives cost across labor, materials, equipment, disposal, salvage, and other direct costs. Change a quantity and the entire estimate recalculates — labor hours, disposal volumes, equipment days, materials — all of it. No manual recalculation. No formulas to maintain in a spreadsheet.

Finished estimates flow straight into the Proposal Builder. Once the estimate is complete, bid line items move directly into the Proposal Builder as structured data — organized by scope group, ready to send. No re-entry. No copy-paste. No version confusion.

FieldFlō Takeoff & Estimating turns project documents into priced bids — with AI extraction, a six-category cost cascade, and scope templates built for demolition, abatement, and remediation from the ground up.

FieldFlō — Where the Field Meets the Back Office. Everything, in One Place.

The Takeoff & Estimating module is one part of a fully integrated platform purpose-built for demolition, abatement, and remediation contractors. From lead to project to closeout — field operations, compliance, billing, and reporting — FieldFlō connects every function without the friction of disconnected tools.
